

MHNC Exhibit Fabricator
Vendor Questions & Answers
June 12, 2024

Question: For AV-2, as detailed on drawing 5.31, there appears to be only one (1) of the Zoomy 2.0 Handheld Digital Microscopes shown being connected to a NUC computer and a 43" LED Display. The AV Schedule on drawing 0.02 indicates a quantity of ten (10) of the Zoomy Handheld Digital USB Microscopes. Should we assume that there is to be only one (1) of these Zoomy Microscopes required? If there are actually ten (10) of them required, we would then request additional drawings and/or information about how they would connect and/or interact with the 1 computer and 1 monitor via hardware and/or software.

Answer: The intent is to have one microscope connected to the AV hardware display and place the remaining nine in attic stock.

Question: Regarding the bird beaks hands on item. Is that intended to be a supervised instructional interactive? Or will it be available for anyone that walks into the nature center?

Answer: It is unsupervised.

Question: Do you know if the building is already completed and ready for the installation of the exhibits? Or, if it is still under construction, when is it scheduled to be completed?

Answer: The building remodeling is completed. The only thing that has to happen for the displays is that our IT department has to hook up the data lines for the bird area and the lab area and the wi-fi access point in the main hallway. Otherwise everything is ready for the displays.
